

FRACTIONAL CISO · PRODUCT COMPANIES

Security leadership that keeps pace with your business.

I'm a fractional CISO for product companies — 20+ years building and running security programs, from CISO of a venture-backed product company to executive coach. I find the 20% of the work that brings 80% of the results.

Fixes applied

- 1 Focus + skip link**
Added a visible skip-to-content link and a 3px focus ring on every interactive element for keyboard and screen-reader users.
- 2 Contrast & type size**
Body raised to 18–21px with dark ink on warm paper (≈12:1 contrast). No light-gray text; one clear primary CTA instead of two equal buttons.
- 3 Labeled iconography**
Ambiguous ♦ © ✱ glyphs replaced with aria-hidden SVG icons paired to real headings, so meaning never depends on a decorative symbol.
- 4 Readable dark stats**
Stat figures use a high-contrast mint on deep green (AA-large) with generous size, keeping metrics legible for low-vision readers.

Why AikiField

Many consultants hand you a roadmap and leave, or program. I integrate security into your business process, revenue-aware, and built to last.

[Hide fix notes](#)

Security built into the business

I left-shift security into your development budget, align it to your revenue model, and focus on what customers actually require — a lean program that protects without slowing you down.

AI-assisted security engineering

AI-assisted triage and remediation workflows that cut vulnerability mitigation from 21 days to 3, across application, cloud, infrastructure, and customer-reported vulnerabilities.

Leadership that sticks

Security programs fail when leadership capacity is missing. I pair security advisory with presence-based coaching, so your leaders develop the judgment to lead for the long haul.

From roadmap to reality

Most security engagements produce a document. Most don't produce results — pairing 20+ years of CISO-level experience with a coaching methodology that develops the leadership to execute under pressure.

CARDINAL ASSUMPTION

Energy follows attention

Stat figures use a high-contrast mint on deep green (AA-large) with generous size, keeping metrics legible for low-vision readers.

Where a leader places attention determines the security posture of the whole organization — the starting point before tools or frameworks.

PRINCIPLE 2

Relational harmony

Security is a conversation. Partnering with engineering, aligning with product, and building customer trust is what makes programs work.

The grounded, calm authority a leader projects in a breach, a board meeting, or a customer security review. Presence is trainable.

PRINCIPLE 3

Open inquiry

The capacity to not-know, question assumptions, and sense emerging risk before it materializes is the essence of security leadership.

4 Results that speak

Real outcomes from real engagements.

\$5M

Sales channel recovered

Recovered a blocked sales channel worth \$5M ARR by executing a roadmap that resolved security objections across multiple customers.

87%

Remediation
